CASHFLOW: RE-LAUNCH!

HARD ASSETS: \$ 167,691

This state-of-the-art commercial pressure washing service was created in August of 2007. To this day it is the most complete provider of the service with the most technically capable equipment and systems.

Hot water used in conjunction with an environmentally friendly process safely removes grease, oil, stains and build up from sidewalks, trash enclosures, buildings and many other surfaces in a professional and knowledgeable manner. This business was not founded on a simple “spray hot water” approach.

The Clean Water Act requires full reclamation and the waste water generated from the high pressure washing process to be thoroughly filtered, and all solids, fines and Class II hazardous materials (petroleum products) to be safely and effectively removed and separated from the

wash water before they reuse and/or discharge the water.

To this end, the seller spent a full year designing and building a **unique** trailer mounted system that fully complies with the act and the specifications for water reclamation required for all federal facilities which also includes Native American operated gambling casinos.

Within a couple of years of business operations and building the client base, the seller experienced health issues and was unable to operate and manage the operation in an optimized manner. Thinking his health would return, the seller has attempted to carry on for the last 6 years. The business is now in a re-launch mode and requires new ownership and management.

Included in the sale is a complete operating business including \$167,691 lightly used equipment (250 hours or less) , The Hot & Mighty EPA/CWA Certified Mobile Wastewater Reclamation System, a state of the art SEO enhanced web site, customer contact list and extensive seller training and administrative setup support.
